

Team Meeting

12 OCTOBER 2021 / 04:00 PM / GOOGLE MEETS

Attendees

Keira, Matt, Shaya, Ramisa, Cater, Rick
Misu

Agenda

Last Meeting Follow-up

1. Client is working on story draft

New Business

Q: Do you have UI mockups or design examples, or should we just make what looks and feels correct?

Something tonight or tomorrow morning - Figma

Or a possible list of things on each page

Q: Are we getting more specifics for requirements or are we just interpreting our systems from the requirements document we've got?

Starting with given requirements

Q: For the QR reader, are we meant to be testing it with hardware, or are we to just generate unique QR codes for now, and you guys will test and implement the scanning hardware later?

Don't test with hardware now, just generate unique codes

Q: Will lab equipment, status, and inventory be manual entry for now?

Manually entry

In future, it might be automated

Q: Lastly, we have talked about a desktop app and a separate webapp, do you want one or both?

Connected? Same thing? I think, we can probably just make a web app, and have clients and users as different account types

Q: From the Core requirements - "verify the completeness" what does this mean and how do we do this?

We don't need to do this? Will ask Lukman

Q: What are the fields to be filled by the customer?

We will get that week by week

Notes

- To Do: create base webapp, with login page, and database
- We can use Postgres. If SQL Server doesn't really work
- Rest APIs
- Put all db calls into one class/file etc. So its easy to switch to Rest APIs
- So function `get_all_users()` called to a different files which has `SELECT * FROM USERS` function. The SQL queries are not buried all around in the code
- Avoid tightly coupled things

Next Meeting Agenda

Will get some user stories and UI design stuff

Review these
