Action Items:
- Need to settle on a programming language
-- Angular and Java were suggested
- Need a Git repo to be made for the project
-- Client wants a independent repos for project teams that push features to a master repo run by the client
- Need to find out about UBC server for backend
-- Was suggested for database hosting
- Need to talk to prof to confirm organizational structure for the project
-- Still unclear if we're all building separate platform or building separate features on same platform
